

## New Model 6600HS High-Speed Cleaning for Industrial Fluids

The new Spinner II 6600HS centrifuge is a highly efficient, self-contained unit for bypass and off-line cleaning of industrial fluids, including hydraulic oil, waste oil, quench oil and press oil. Designed with sealed, high-speed bearings, the centrifuge is able to process non-lubricating fluids, such as glycols, amines and biodiesel.

A Spinner II 6600HS centrifuge cleans fluids better – and keeps fluids clean longer – than any other filtration method. This provides big savings through lower maintenance costs, improved wear protection and increased machinery productivity.

### EXTENDS FLUID LIFE

- Reduces costs of fluid, media filters and labor
- Keeps machinery in service longer
- Decreases component wear
- Increases overall service life of machinery

### FOR ANY INDUSTRIAL FLUID APPLICATION

Spinner II centrifuges are used to clean fluids on a wide range of machinery. They are applied to stationary equipment like cone crushers, drill rigs, coal pulverizers and ball mills, as well manufacturing processes such as quenching, grinding, honing, stamping, wire drawing, heat treating, gun drilling, cutting, CNC machining and boring.

### POWER TO DEEP-CLEAN

A Spinner II centrifuge generates up to 2,000 G of centrifugal force to remove both large debris and ultra-fine particles as small as one-tenth of a micron. Unlike barrier media filters, the centrifuge extracts contaminants from the oil stream and deposits them as a dense, solid cake in a high-capacity rotor. So cleaning efficiency remains constant and fluid service life can be safely extended much longer than standard drain intervals.

### TRUSTED, PROVEN

Spinner II centrifuges have provided unmatched fluid-cleaning performance for more than 30 years and have been installed as first fit by more than 50 original equipment manufacturers. They are specified on new equipment or retrofitted to existing machinery.
